1 of 65.

Which three Salesforce resources can be accessed from a Lightning web component?

Choose 3 answers

- A. [x] Static resources
- B. [x] SVG resources
- C. [ ] All external libraries
- D. [x] Content asset files
- E. [ ] Third-party web components

2 of 65. A developer identifies the following triggers on the `Expense__c` object:

```
deleteExpense,
applyDefaultsToExpense,
validateExpenseUpdate;
```

The triggers process before delete, before insert, and before update events respectively.

Which two techniques should the developer implement to ensure trigger best practices are followed?

Choose 2 answers

- A. [x] Create helper classes to execute the appropriate logic when a record is saved.
- B. [x] Unify all three triggers in a single trigger on the `Expense__c` object that includes all events.
- C. [ ] Maintain all three triggers on the `Expense__c` object, but move the Apex logic out of the trigger definition.
- D. [ ] Unify the before insert and before update triggers and use Flow for the delete action.

4 of 65. Universal Containers wants to ensure that all new leads created in the system have a valid email address. They have already created a validation rule to enforce this requirement, but want to add an additional layer of validation using automation.

What would be the best solution for this requirement?

A. ○ Use an Approval Process to enforce the completion of a valid email address using an outbound message action.

B. ○ Submit a REST API Callout with a JSON payload and validate the fields on a third party system

C. ● Use a before-save Apex trigger on the Lead object to validate the email address and display an error message if it is invalid

D. ○ Use a custom Lightning Web component to make a callout to validate the fields on a third party system.

5 of 65. A developer created a trigger on the Account object. While testing the trigger, the developer sees the error message 'Maximum trigger depth exceeded'.

What could be the possible causes?

A. ● The trigger is getting executed multiple times.
B. ○ The developer does not have the correct user permission.
C. ○ The trigger is too long and should be refactored into a helper class.
D. ○ The trigger does not have sufficient code coverage.

The Visualforce page shows information about a single record. The developer decides to use Lightning Data Service to access record data.

Which security consideration should the developer be aware of?

A. ○ The `isAccessible()` method must be used for field-level access checks.

B. ● Lightning Data Service handles sharing rules and field-level security.

C. ○ The `with sharing` keyword must be used to enforce sharing rules.

D. ○ Lightning Data Service ignores field-level security.

```
Total_Timesheets__c
Total_Approved_Timesheets__c
Total_Rejected_Timesheet__c
```

The developer is asked to create a new field that shows the ratio between rejected and approved timesheets for a given project.

Which should the developer use to implement the business requirement in order to minimize maintenance overhead?

A. ○ Record-triggered flow
B. ○ Roll-up summary field
C. ● Formula field
D. ○ Apex trigger

The Sales Representative user should be able to see the commission field on each record. The Sales Assistant user should be able to see all fields on the record except the commission field.

How should this be enforced so that the component works for both users without showing any errors?

A. ○ Use Lightning Locker Service to enforce sharing rules and field-level security.

B. ○ Use `WITH SECURITY_ENFORCED` in the SOQL that fetches the data for the component.

C. ● Use `Security.stripInaccessible` to remove fields inaccessible to the current user.

D. ○ Use Lightning Data Service to get the collection of sales records.
